

Optimise your summer feed balance

- Very high livestock performance potential
- Optimise summer feed by producing more DMt/ha than traditional pasture methods
- Multi-graze potential if moisture available
- Ideal for oversowing in the following Autumn into the established herbs and clover

Our Top Crop blends are unique summer forage varieties that can deliver high quality summer feed. Top Crop blends have a proven track record for delivering feed for stock when you need it most.

Top Crop Brassica & Herbs contains a unique blend of Pillar Forage Rape, Titan Forage Rape, Pasja II, Chico Chicory & White Clover.

This blend is fast establishing, producing high quality feed 6-8 weeks after sowing. It has the potential for multiple grazing's through summer period when traditional pasture quality & production decreases.

It responds well to summer rainfall & with it's superior regrowth potential it's an ideal blend if you are looking for high energy, high DM through to later summer.

Take advantage of the established herbs & white clover by oversowing with perennial or Italian ryegrass in Autumn.

Sowing Date	Sowing Depth	Sowing Rate
Spring/Early Summer	5-10mm	8 kg/ha
Rainfall / Irrigation	Soil Temperature	Maturity
650mm p.a	12+	50-65 days
Potential Grazing's	Disease Resistance	Bag Size
Multiple	Good	24kg
